Install emacs Editor

Wednesday, December 13, 2017   8:07 AM

From a command prompt:

>   ***sudo apt-get install emacs***

When executing emacs the first time you may see an error similar to the following:

"** (Emacs: different number each run): WARNING **: Error retrieving accessibility bus address: org.freedesktop.DBus.Error.ServiceUnknown: The name org.a11y.Bus was not provided by any .service files".

To stop this error perform the following from a command prompt:

1. ***cd***

2. ***nano .bashrc***

3. add the following line: ***export NO_AT_BRIDgE=1***

4. Logout and then login and verify the fix worked
